Coiled tubing is a continuous length of steel pipe, spooled onto a large diameter reel. The pipe comes in a variety of sizes and can be run into any well. Coiled tubing is commonly used to convey tools, and circulate liquids and gases into and out of the wellbore without relieving the wellbore pressure.

The reeled drillstring system repeatedly used a bottomhole mud percussor and an oscillator (at different times) to drive the bit. In 1935, a total of 4,000 ft of borehole was drilled with this system, with a maximum single borehole depth of 2,000 ft. The Bannister reelable drillpipe system reportedly became inactive in or about 1940 because of the lack of suitable downhole motors available.
