### Building Your Own Engine Harness !!

Prepping a Harness. Again, this is a case where your new accessory came with a wiring harness of some kind. Take a moment to inspect it to be sure that it is truly ready to install, rather than get in the vehicle and start wiring it up only to find out that: Some or all of the wires are not long enough.

### How to Build a Wiring Harness - Muscle Car DIY

Create wires Use Create Wire to create a wire between two pins within a harness assembly. The pins can exist on electrical components (connectors) or splices. The wire that is created is selected from the Cable & Harness Library. The wire is created as rendered or centerline and with or without natural curvature depending on the selected display setting.

### Creating a Wire Harness with Harness Design

Wire occurrences are created by selecting a library wire type and indicating the pins that the wire is connected to in the context of the assembly. You can place wires manually by selecting pins or automatically by importing a wire list. When a wire is placed, it exists as a point to point connection between the pins to which it is attached with a slight curve as it approaches the pins.

### Creating a wire harness with Harness Design

In Cable and Harness, splices are a virtual representation of the splice location and the wires that are joined together to make a path for electricity to flow. The splice is created with a default size, is offset a specified distance from selected face geometry, or is associated to selected geometry. The default offset for splices is set on the Splice tab of the Harness Settings dialog box
