i This Manual is written for those who fill Kidde Carbon Dioxide (CO₂) Suppression System Cylinders. IMPORTANT Kidde assumes no responsibility for application of any systems other than those addressed in this manual.

Carbon Dioxide Fire Suppression Systems

The valves can also easily be opened manually. CO₂ is highly suffocative, and the protected space must be evacuated before any CO₂ is released. The Survitec CO₂ system is designed with a pre-alarm system and a time delay function to allow the evacuation of the hazard

area and avoid danger to the crew.

Survitec CO₂ System

The High Pressure Carbon Dioxide System is especially effective for non-occupied hazards. Personnel occupying areas protected by carbon dioxide systems must be evacuated prior to system discharge. Therefore, discharge time delays and alarms are mandatory for occupied hazards.

Product Detail

CO₂ SYSTEM OPERATION AND MAINTENANCE to the machine's insulating system,⁴ is easy to clean up (compared to other media), thus allowing

quick return to service after an inadvertent release, and is relatively inexpensive. For a discussion of CO₂ in comparison to other suppression media, see the Reclamation

CO SYSTEM OPERATION and MAINTENANCE

Carbon dioxide gas has a high rate of expansion, which allows a Fike CO₂ fire protection system to work fast. When applied to a fire, CO₂ provides a heavy blanket of gas that reduces the oxygen level to a point where combustion cannot occur. Since carbon dioxide is a gas, there is no clean-

NK

The ANSUL CO2 Fire Suppression System can be actuated by detection and control equipment for automatic system operation along with providing local and remote manual operation as needed. Accessories are used to provide alarms, delay discharge, ventilation control, door closures, or other auxiliary shutdown or functions.

High Pressure Carbon Dioxide Description Fire Suppression

...

The HP system consists of a number of CO₂ cylinders, whose outlets are connected to a common manifold. From there, the CO₂ is directed, via selector valves, into the various protected spaces. If the protected space is large, a high number of cylinders are required. These can be replaced by a single CO₂ tank, saving approximately 50% in weight and installation costs.
