In physics, Kaluza–Klein theory (KK theory) is a classical unified field theory of gravitation and electromagnetism built around the idea of a fifth dimension beyond the usual four of space and time and considered an important precursor to string theory. Gunnar Nordström had an earlier, similar idea. But in that case, a fifth component was added to the electromagnetic vector potential ...

The unification attempt by Hermann Weyl (1885–1955) in 1918, finally, was to apply a gauge transformation within a four-dimensional space with a generalized non-Riemannian metric [10]. Although Nordström was the first to introduce a five-dimensional space, it was Kaluza's theory from 1919 that proposed a realistic unification of the two interactions.

Hermann Klaus Hugo Weyl, ForMemRS (German: ; 9 November 1885 – 8 December 1955) was a German mathematician, theoretical physicist and philosopher. Although much of his working life was spent in Zürich, Switzerland, and then Princeton, New Jersey, he is associated with the University of Göttingen tradition of mathematics, represented by David Hilbert and Hermann Minkowski.

This point of view, called the Kaluza-Klein theory (Theodor Kaluza made the first steps after Weyl) is now generally accepted. Moreover, it is just the first stage in the enlargement of ordinary space-time. To include the other nuclear forces we need even more dimensions and current research centres on a total space-time dimension of 10 or 11.
