### Life

Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate. Various forms of life exist, such as plants, animals, fungi, protists, archaea, and bacteria.

### Life - Wikipedia

life: [noun] the quality that distinguishes a vital and functional being from a dead body. a principle or force that is considered to underlie the distinctive quality of animate beings. an organismic state characterized by capacity for metabolism (see metabolism 1), growth, reaction to stimuli, and reproduction.
