In computing, Common Gateway Interface (CGI) is an interface specification for web servers to execute programs like console applications (also called command-line interface programs) running on a server that generates web pages dynamically. Such programs are known as CGI scripts or simply as CGIs. The specifics of how the script is executed by the server are determined by the server.

CGI programs or CGI scripts. It is a simple way to put dynamic content on your web site, using whatever programming language you're most familiar with.

Apache Tutorial: Dynamic Content with CGI - Apache HTTP ...

Because a CGI application does not write to screen, and is started by another process (the web server), debugging is more difficult than desktop applications. One solution is to let the CGI application start a debugger: When used in a program this unit will as part of the initialization launch a new process which opens a terminal (windows:cmd, linux:xterm) and starts the gdb debugger attaching ...
